Discovery Kit Specifications

High-Performance 32-bit Microprocessor

Bluetooth, Bluetooth Low-Energy, and NFC wireless interfaces. **Note**: Bluetooth will be the primary supported interface in the initial firmware release.

Ultrathin rechargable lithium polymer battery

8 GB of high-performance flash storage

AES 256 bit hardware suported encryption. **Note**: access to the hardware encryption engine may not be available in the initial firmware release.

On-card biometric facial recognition. Additional biometrics will be made available through subsequent firmware updates.

Access to the **GateKeeper** mobile and desktop application* and related source code for personal use or as examples when developing your own applications. **GateKeeper** acts as the biometrically secured application interface that sits between your device and the critical data stored on your ***CyberGate*** card.

A **full year of free access** to all firmware and application software upgrades; API documentation; and all related software development kits (SDK). All the tools and information needed to develop and integrate custom applications with the ***CyberGate*** platform.

*Note: The initial release of the ***CyberGate*** API will be compatible with most devices supporting Bluetooth 4.0 or higher. This includes most smartphones, tablets, desktop computers, and laptops. Additionally, the initial beta release will also inlude the GateKeeper application software and related SDK for Android 4.1+ devices.

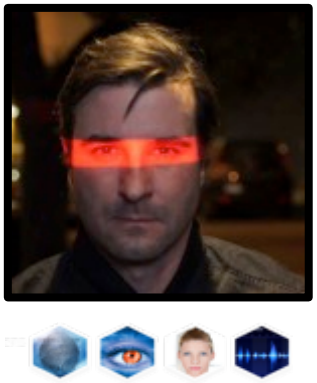
Secure Mobile Briefcase (SMB)
Fact Sheet



BluStor PMC, Inc. is a leader in the development of multi-factor biometric authentication, authorization, and data security solutions targeting the increasingly digital and mobile world. Providing information and data protection for vertical markets that include health/medical; enterprise protection; government sector; and financial services.

BluStor CEO, Finis Conner, was the co-founder of Seagate Technology and the founder of Conner Peripherals – two industry leading Fortune 500 companies. Conner Peripherals became the fastest-growing manufacturing company in U.S. history, growing to $1.4 billion in sales in its fourth year.

REVOLUTIONARY

CyberGate is a revolutionary biometric solution that directly addresses major cyber security vulnerabilities by providing state-of-the-art personal and enterprise identification; comprehensive data security; and complete control over all of your critical data.

DIFFERENT

While other data-on-card smart authentication solutions are available, none have the advanced, robust features of BluStor ***CyberGate*** SMB. ***CyberGate*** SMB features the use of biometrics, including fingerprint, facial, voice, iris recognition and more; up to 8GB of high-performance flash storage; rechargeable battery; Bluetooth, Bluetooth Low-Energy and NFC enabled capabilities with no new hardware required; one of the industry's lowest hardware costs; and OEM and individual development opportunities.

BluStor ***CyberGate***™ Secure Mobile Briefcase (SMB) is the industry's most comprehensive, secure solution to protect critical data in our digital and mobile world and the emerging Internet of Things (IoT) industry.

Leveraging the sensor technology available on smartphones, tablets, desktop computers, laptops, and other security devices, the ***CyberGate*** platform supports multi-factor biometric authentication (fingerprint, facial, voice, and iris) in an easy-to-use wallet-sized card. No other product has all the features and functionality, virtually eliminating threats associated with compromised user credentials. The individual and the enterprise are put back in control of information and sensitive data.

BluStor takes a different approach to protecting data. BluStor ***CyberGate*** SMB secures the person -- not just the system or device -- eliminating standard identification credentials. The ***CyberGate*** platform is a security and data storage upgrade path to existing smart card based security solutions and compatible with mobile devices, wearables, traditional desktops and laptop computers. The GateKeeper mobile and desktop application provides easy-to-use wireless biometric authentication and secured file access.

BluStor ***CyberGate*** SMB provides these benefits:

- Secures the person and not just the system or device.
- Stores critical data securely with built-in, government grade hardware encryption and secure online and offline wireless communications.
- Allows data owners to determine when and who to disseminate information to.
- Comes with a complete Software Development Kit.
